9 Models of the Demographic Effect of AIDS

In the short term, there is a need to strengthen the provision of family planning services in order to ensure that it is varied, high-quality and accessible provide a wide range of methods, with no stock-outs, and with appropriate counseling activities. Statistical models tend to be simple, and subject to data quality constraints one can easily assess how well the model has worked in the past. Bongaarts and Potter 1983 estimated this regression equation

from data on breastfeeding and amenorrhea from about 25 countries.

The Changing Context of the Transition in sub

Even as more information becomes available from developed countries, its relevance for Africa will remain questionable.

9 Models of the Demographic Effect of AIDS

Zimbabwe Fertility levels across age groups in Zimbabwe are similar to those observed in Ondo State, but contraception is the major inhibitor to fertility. At a minimum, observed fertility would increase by 4.

Harnessing the Demographic Dividend in Sub

Most of the current AIDS models indicate that growth rates will fall, but Anderson and colleagues are generally alone in predicting negative rates.

For instance, in some models the epidemic is initiated by introducing a few infected persons into a population. Curran 1986 Acquired immunodeficiency syndrome: Current and future trends.

Projected Religious Population Changes in Sub

Women with some education are also likely to seek modern health care for medical problems, such as STDs, leading to reduced subfecundity Cochrane, 1979; Romanuk, 1980.

Demographic Change and Rural

Using the Bongaarts model of proximate determinants of fertility, we examine how these four factors influence the levels of fertility and illustrate different effects of each DATA The data sources for this analysis are the 12 DHS of women conducted in sub-Saharan Africa during the 1980s and the WFS conducted during the 1970s in Ghana, Kenya, Senegal, and northern Sudan.
