## Cycles: Interaction between Multiplier and Accelerator

After reading Wikipedia and some other articles, I had the feeling to not really understand completely in depth.

## On the theory of stochastic acceleration of high energy particles in cyclic accelerators

As the process continues, the initial impacts will spread throughout the economy.

## THE THEORY OF ELECTRON MOTION IN CYCLIC ACCELERATORS IN PRESENCE OF RADIATION (Journal Article)

As a result, the growth of output and income propelled by the combined operation of the multiplier and accelerator moves the economy on to the upward expansion path from P<sub>0</sub> to P<sub>1</sub>. Schumpeter believes in the existence of Kondratieff long wave of upswings and downswings in economic

## CiteSeerX — Two step nonlinear acceleration theory for cyclic particle accelerators

As the boom progresses, there is a tendency for the MEC to fall due to two reasons. But in mild depressions, there has been a reduction in the growth rate of the money stock rather than any actual fall. But this does not happen because of the upper limit or ceiling set by the full employment level FF.

## Samuelson's Model of Business

activity.
