However, some researchers continue to work in areas informed by psychodynamic ideas—such as those who study attachment orientation and the extent to which it relates to childhood.

### **Genetics and personality affect visual perspective in autobiographical memory**

The psychoanalytic theory proposed by Sigmund Freud had a tremendous impact on 20th-century thought, influencing the mental health field as well as other areas including art, literature, and popular culture. These accounts provide captivating glimpses of the individual life paths of these influential psychologists and illuminating perspectives on the people, ideas, and events that have shaped this psychological speciality. As he described it, self-actualization is a relatively rare achievement—he cited historical figures such as Lincoln and Einstein as examples of self-actualized people.
