Long

For example, interstate pipeline companies rely heavily on underground storage to facilitate load balancing and system supply management on their long-haul transmission lines. Most participants spoke favorably of industry safety practices and State regulation but saw no immediate need for Federal regulatory action. The annual number of injections and withdrawals is normally low with the daily transmission rate depending on the porosity and permeability values Ahmed et al.

Our Services

In fact, it is impossible to assume that the vertical migration of natural gas to the surface from the gas storage reservoir will never occur.

The feasibility analysis of underground gas storage during an integration of improved condensate recovery processes

Gas storage is the operation of gas transmission from a reservoir to another reservoir which is close to the target market, to avoid burning and other losses incurred from a drop-in consumption demand Azin et al. Since the IFR, PHMSA received many notifications for routine maintenance activities, which was not the intent of the regulation. The report recommends that the State go further and require more quantitative risk assessment activities, including consideration of human and organizational factors affecting risk.

Samgori South Dome Underground Gas Storage Project, Georgia

PHMSA received 54 additional comments during the re-opened 30-day comment period, but only 14 of those 54 related to this rulemaking.

Underground Gas Storage Facilities

Gas Free Seneca and private citizens asked that PHMSA set a measurable limit for risk and specify the types, frequency, and methods operators must use to collect and conduct risk analyses. Data from the EIA-912 survey are tabulated and published weekly at regional and national levels. Similarly, TransCanada stated that it was impractical to implement the IFR by January 18, 2018, and asked that PHMSA clarify in the final rule

what the agency expected operators to have achieved by January 18, 2018, and beyond.

Ahuroa Underground Gas Storage Facility

PHMSA estimates the combined annual burden for OPID Assignment and Operator Notification at 49 hours.

Underground storage operations (Journal Article)

Table represents a brief set of some of the petrophysical characteristics of the reservoir. The reservoir is monitored by down hole gauges which are fed into the dynamic reservoir model to monitor the performance. PHMSA fulfilled this mandate by publishing the IFR on December 19, 2016.
