Median nerve evoked potential N20

Forelimb somatosensory map The forelimb somatosensory map Fig.

TSpace Repository: Statistics

In this case, grip adaptation would rest on adjustments of cortical activity and connectivity among sensorimotor areas Aoki et al. Forelimb motor map Forelimb motor maps Fig. We analyzed the EEG responses to TMS of Brodmann's area 19 at increasing intensities in five healthy subjects.

V. Dietz

To evaluate the properties of this receptor system, an experiment was designed under simulated 'microgravity', in water immersion.

Rumyana Kristeva

The organization and connections of somatosensory cortex in marmosets.

TSpace Repository: Statistics

A comparison with the activation maps in fMRI under the same somatosensory stimulation paradigm was done. Out of water loading of the subjects resulted in no further increase of the response amplitude.

TSpace Repository: Statistics

Task epochs clearly modulated gamma power, especially for finger and scissor grips. They are especially easy to raise and handle in laboratory conditions due to their small body size, and are characterized by fast sexual maturation Lu et al. Abstract A major goal of many translational

neuroimaging studies is the identification of biomarkers of disease.

General indices to characterize the electrical response of the cerebral cortex to TMS

Altogether, these features suggest some basic differences in the cortical mechanisms of grasping across species. Clinical and neurological examinations were performed in these patients according to the protocol of the American Spinal Injury Association ASIA.
