 Scientific discourse in sociohistorical context - the Philosophical transactions of the Royal Society of London, 1675-1975

1. Introduction  
 The type of discourse authority has already proven to be a popular research theme in the fields of science communication, public understanding of science (PUS), public engagement with science, and science studies. The focus of this study is on the evolution of the PUS discourse authority in the United Kingdom (UK). The discourse authority of scientists is considered to be controlled by science and scientists, while the discourse authority of other actors is considered to be controlled by the public and society. This study aims to explore the changes in the discourse authority of scientists in the UK over time, as well as the 'inclusive legitimacy' of scientists and scientists in the online science communication process. By doing so, this study hopes to provide some insights into the future development of science communication in the UK, as well as the 'inclusive legitimacy' of scientists and scientists in the online science communication process. This study is also expected to contribute to the development of science communication in China, where the situation is changing and developing in online science communication in China.

Rhetoric, knowledge, and society  
 Scientific discourse in sociohistorical context - the Philosophical transactions of the Royal Society of London, 1675-1975

Notes: Includes bibliographical references (p. 183-196) and indexes.

## Scientific Discourse in Sociohistorical Context

The journal was controlled by the Committee of Papers of the Royal Society rather than the secretary after 1753. Most significantly, this volume demonstrates how these historical activities need to inform current teaching of and thinking about language.

## Scientific discourse in sociohistorical context : the Philosophical transactions of the Royal Society of London, 1675

Atkinson adopts two independent approaches to the analysis of written discourse--from the fields of linguistics and rhetoric-composition--and then integrates and interprets his findings in light of the history of the Royal Society and British science.

## The evolutionary pattern of language in scientific writings: A case study of Philosophical Transactions of Royal Society (1665)

Scientific writings by authors with different cultural background have different linguistic characteristics.

## Late Modern English Medical Texts 1700

Though the philosophical dialogue genre is a cultural prototype for decision making dialogue, the history of the news article genre and the professional norms of journalism are relevant to the study of controversy because news texts serve as a location of public controversy for many readers. This allows us to differentiate the post period. By contrast, authors tended to use simpler grammar in the PTRS.
