What Is a Computer Network?

So, when one user prepared some documentation, he can make the document online enabling other to read and convey their opinions. There are not too many aspects of information exchange and data processing in which a LAN cannot be found.

The Basic Types of Network Protocols Explained

Business integration: This level is concerned with interOperation of people and systems.

Communication Networks

The server provides data and responds to requests from each client, while each client accesses the data on the server in a way that is independent and ignorant of the presence of other clients accessing the same database.

Different Types of Communication Networks

The best-known computer network is the Internet. The preferred LAN is IEEE 802. Networks in this sense form a loose coalition of devices that share information.
