Computational and Cognitive Neuroscience MSc

Visual and other kinds of images play an important role in human thinking. Calibrating the eye motion of an humanoid robot IEEE 7th Int. Representations of concepts can be stored in different parts of the neural-like network, without interfering one another.

Computational Cognitive Science Lab

Trajectories can be linked to field data on home range productivity and related indices derived from remotely sensed data, e.

Zoya

The sensors are designed using.

Analysis and visualisation of movement: an interdisciplinary review

The effect of experimenter on the observations: Clever-Hans effects. Within a few decades, however, experimental psychology became dominated by , a view that virtually denied the existence of mind.

Analysis and visualisation of movement: an interdisciplinary review

Eötvös Loránd University ELTE offers more than 60 degree programs in foreign languages in the fields of Education and Psychology, Humanities, Informatics, Law, Social Sciences and Science. In this way, computers and mind, although they can be interrelated to the aspect of demonstration, they cannot share originality and creativity like the mind itself is concerned. In addition, philosophy concerns itself with normative questions about how people should think as well as with descriptive ones about how they do.
