For crack and crevice applications to control pests like spiders and cockroaches, plan to apply Shockwave 1 at a rate of 1 second per 3 linear feet. A normal shock occurs in front of a supersonic object if the flow is turned by a large amount and the shock cannot remain attached to the body.

Since the total amount of energy within the system is constant, the stagnation enthalpy remains constant over both regions. If you attempt to download the Shockwave Player in a 64-bit browser on Windows operating system that does not support Shockwave Player, you see a message from Adobe and a link back to this page.

There is a loss of total pressure associated with a shock wave. The appearance of pressure-drag on supersonic aircraft is mostly due to the effect of shock compression on the flow.
