Darwin Among The Machines: The Evolution Of Global Intelligence by George Dyson

This was the first non-fiction book that I got to on my 20 Books of Summer list.

Darwin Among The Machines: The Evolution Of Global Intelligence by George B. Dyson, Paperback

I would not urge more than this. Dyson jumps around like a bluebottle from thought to thought, from person to person, until your head starts to spin. Couldn't you just say it in your own words, for once? The book is neither comprehensive nor very focused which explains my rating, but it does dip into many fascinating intellectual spaces.

Darwin among the Machines

Such a substantial amount of text in the book is presented as direct quotes, that at times it creates the illusion that the book is nothing but a very-well done library research job. Well worth a read if it's your sort of thing.

Let there be no exceptions made, no quarter shown; let us at once go back to the primeval condition of the race. I've read a lot of these kinds of

things before, so I really enjoyed all the OMG, I never imagined that non-fiction could be this FUN. Just as the exchange of coded molecular instructions brought life as we know it to the early earth's primordial soup, and as language and mind combined to form the culture in which we live, so, in the digital universe, are computer programs and worldwide networks combining to produce an evolutionary theater in which the distinctions between nature and technology are increasingly obscured.
